

ENGR 1112 Intro to Engineering
Fall 2007
HW#2
Due Date: Tuesday Sept. 11, 2007

Make a spreadsheet that covers a time period of a week (like that shown in your Engineering Success book) that shows how you are utilizing your time. Include class meetings, lab meetings, meals, study time (for specific courses), entertainment, exercise etc...

Name the spreadsheet uconnectlogin.xls (for example I would call mine elemley.xls).

You can find info on how to use MS Excel here
http://evan.lemley.org/courses/engr1213_sp05/engr1213.php .

Choose an engineering discipline and research it via the Chambers Library
<http://library.ucok.edu/>. You should have read your Engineering Success book about various disciplines at this point - use that reading and any references as a starting point for the following:

1. The basic areas of study of this discipline.
2. A list of at least five jobs that you might obtain with a Master's degree in this area
3. A list of at least five U.S. companies that engage in work in this area -- you should include the name, location, and basic mission of each.

Make sure and properly reference your information. You can always find the proper reference styles here at http://evan.lemley.org/courses/engr_report_format_spring_2005.pdf.

Submit both of these items (the spreadsheet and the engineering disciplines document) to Dr. Lemley in class on the due date and time.
