Fall 2007

HW#7 -- UCO Library Assignment -- Due Tues. Oct. 2 by class-time

Use the [Chambers Library web-site](#) to find some things:

1. Use one of the engineering or related databases (discussed in library session) to search for articles on a physics or engineering topic that you are interested in. You should find full citations and abstracts for at least four articles on a similar topic .
2. Use the UCO library catalog to find two books on another physics or engineering topic of interest to you. You should make sure the books are available (on shelves) and go to the library to check them out.
3. Use the Academic Search database to find one article of your choosing on any topic. You will require the full text of the article.

Submit the following: A print out of a text or MS Word document with a full citation of each article and book identified. For the articles you should also include the abstract. For the Academic Search article **do not** include the full-text of the article rather print out a three paragraph summary that you have written independently of the article.
