Fall 2007

HW#9 – SolidWorks Tutorial -- Due Tues. Nov. 27, 2007 by class-time

Please complete the Solidworks Tutorial:

http://evan.lemley.org/courses/solidworks_tutorial_07nov06.pdf

You may use computers in Howell Hall 319. Other machines around the department also have SolidWorks, but room 319 will be the most dependable.

You can purchase a student version of SolidWorks for around \$100 (\$140 for the exact same thing as the UCO version that includes Cosmos). You have no obligation to purchase SolidWorks.

Homework Deliverable

A print out of each screen from the tutorial as made in Solidworks ***by you***. Please note that you should make sure and place your name on each printed out page. The homework should be formatted as any other engineering homework – the problem statement should be included (that would be this page). Do not try to make each print-out look exactly like the tutorial screen shot – instead just print as soon as you have figured out how to get to the same point as the tutorial.
