

**Introduction to Engineering
Spring 2007
ROBOLab Project
The Rules and Information**

Rules:

1. Your final design requirements are that you may use the following:
 - a. 1 RCX.
 - b. 1 Light Sensors.
 - c. Two (2) Motors.
 - d. Any other standard pieces from the ROBOLab kits.
2. Use only your assigned ROBOLab kit. Use your kit and when you are finished with it place it back into the cabinet in 106.
3. Do not scavenge from other kits or from kits that are not being used. If you identify missing pieces in your kit and are unable to find replacements, let Dr. Lemley know.
4. There are 3 working computers in HOH 106 that has ROBOLab installed.
5. The computer needs to be logged on as *Administrator* and Dr. Lemley is the only one who can do this, so do not log-off or reboot computers since Lemley may not always be available to reboot/log-in.
6. When you are finished with a particular meeting save your programming files to the desktop of the machine you are using. You may also save to a flash drive or the web. This is a good idea since you may not be using the same computer the next time your team meets.

Spring 2007
ROBOLab Project
Sign-off Sheet
(Required for all members of all teams)**

I acknowledge that I have read and understand all of the rules on the **ROBOLab The Rules and Information** page and that I will leave all ROBOLab kit equipment and software in Howell 106 unless I have written permission from Dr. Lemley to remove it.
